

Audience interest: astronomy

uk · 2022-09 to 2026-08 (48 months) · access=all-access, agent=user · generated 2026-09-25

Normalised interest in 'astronomy' over 2022-09..2026-08 (second half vs first half): uk -55.5% share (-69.4% absolute). Confidence: uk low.

astronomy (2022-09 .. 2026-08, 48 months)

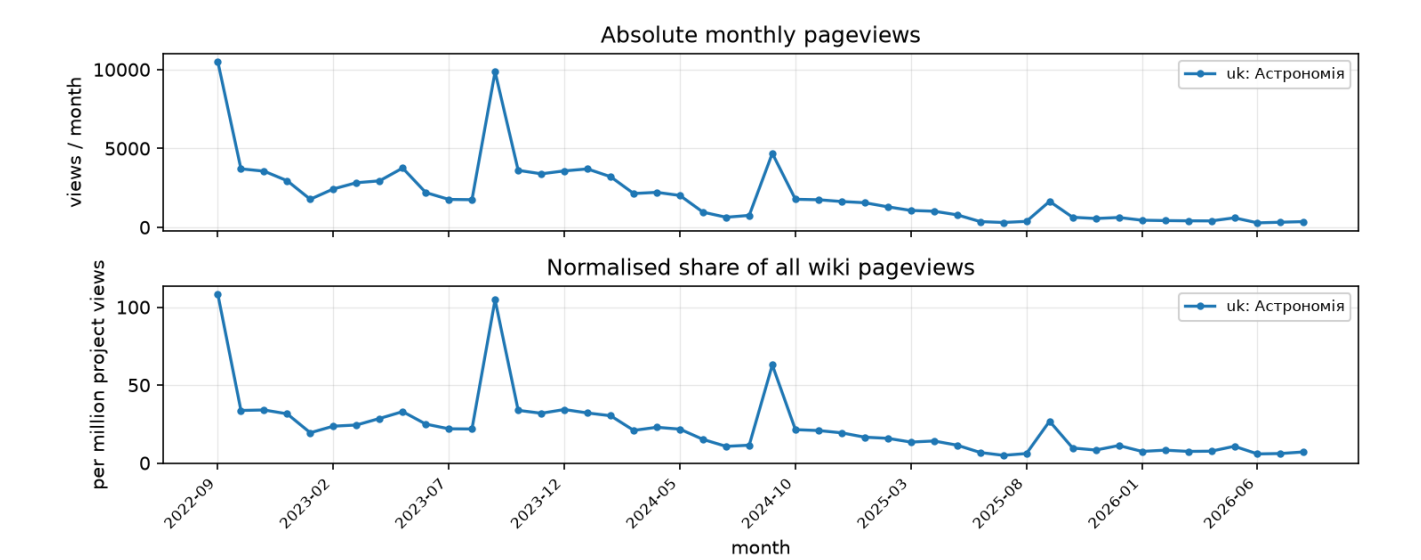

Figure: absolute monthly pageviews (top) and normalised share of all wiki pageviews (bottom).

Lang	Article	Views	Share/M	YoY abs	YoY share	R ²	Confidence
uk	Астрономія	99,552	25.70	-69.4%	-55.5%	0.34	LOW

ASSUMPTIONS & LIMITATIONS

- Pageviews measure article reads, not willingness to pay -- treat this as a direction indicator, not a market size.
- Interest is proxied by one article per language edition; how much of the topic each article covers can differ between editions.
- Requests used access=all-access, agent=user (bots excluded); Wikimedia rate limits were not probed, so requests are sequential with a fixed delay.
- Growth compares the second half of the window with the first half (design choice; see references/methods.md).
- Seasonal signal detected -- uk peaks in calendar month 9 (3.216x the overall mean). A single seasonal cycle can dominate a short window.
- Share = article views / total project views x 1e6; growth counts only when absolute and normalised direction agree.
- Confidence thresholds (R2 0.6/0.4, seasonality 2x, 24 months, 50 views/month) are design parameters, tuned on recorded fixtures.
